

FRAM RK-S
Fireplace cassettes made to measure

1-, 2- and 3-sided,
prism-shaped and round

Custom-fit fireplace cassettes for retrofitting in your open fireplace

To transform your existing open fireplace into a modern fireplace without changing its appearance, custom-made fireplace cassettes are the solution.

In addition to the much more efficient use due to a higher degree of efficiency, there are many other advantages of a fireplace cassette compared to an open fireplace:

- high efficiency and pleasant radiant heat
- clean, environmentally friendly combustion without sparks flying into the room
- complies with the 2nd stage of the BImSchV
- reduced wood consumption
- minimised fire risk and smoke emission due to controlled combustion
- with adjustable secondary air as pane flush
- various designs are possible, e.g. with
- 1-sided, 2-sided, 3-sided, prism-shaped or round pane
- measurement and installation by a specialist
- customised production for your fireplace
- external air supply connection possible

Before: open fireplace

After: with a custom made cassette

Some examples:

Examples of 2-sided chimney cassettes (corner models) after custom-fit installation

Many open fireplaces are corner solutions, for which we can of course also offer perfectly fitting fireplace cassettes.

Examples of 3-sided chimney cassettes (U-shaped) after custom-fit installation

It is precisely the 3-section fireplace cassettes that are used in open fireplaces that achieve a significantly better efficiency. If the efficiency of an open fireplace is only 30 %, a fireplace cassette achieves up to 90 %. Controlled burning, no flying sparks and less wood consumption are further advantages of a fireplace cassette.

Examples of chimney cassettes with prismatic panes after precisely fitting installation

In some old open fireplaces, a 3-sided fireplace cassette with a straight pane shape would not suit the look. Here, the prism-shaped fireplace cassettes fit perfectly. The angle of the panes is precisely adapted to the firebox.

Examples of chimney cassettes with round discs after custom-fit installation

As you can see from the examples, custom-made fireplace cassettes with curved panes can also be made. Even a fireplace cassette for a fireplace with 360° fire visibility is possible!
